AS-740 Cementitious Waterproofing

ALSEAL Cementitious Waterproofing is a semi-rigid cement based of two components polymer modified waterproof coating. It is formulated with specially selected and graded fine quartz and high quality polymer to create brushable, smooth slurry with excellent bond and adhesion to most substrates. It seals pores voids and cracks of substrates and yet provides a breathable coating which allows water vapor transmission.

Applications:

It is used to provide water and damp proofing coats to concrete structures, bricks and masonry works, plasters etc. Used in underground retaining walls, tunnels and basements. Foundation walls and footing subjected to ground moisture can also be protected by it.

Available colour: Grey

Features:

- ✓ Excellent water resistance for both positive and negative side application
- ✓ Provides a durable, seamless protection layer
- ✓ Allows transmission of water vapour from interior of the building
- ✓ Puncture resistant
